Dorian Conley of DMC Diesel said:

"As the owner of the company, I have used brake cleaners such as the old style CRC Brake Kleen. After using KatzAzz Brakeblaster for only 10 minutes on new brake rotors and dirty engine components, I can say that it works better than the old Brake Kleen formula. The smell is much better than all of the previous brake cleaners that we have used in the past. I was Very happy with the sample product and would recommend to anyone looking for a replacement brake blaster/parts cleaner.

I requested a sample kit be sent to McRae Mechanical as Mike has now purchased (6) case of the brake & parts cleaner and loves it. Since he tried the sample can of the Ultralube he has ordered (1) case of it to have in his truck. He did a test on getting a bolt out on a Duramax diesel injector as they normally break off. The ultralube did the trick. The product crept down overnight on a soak to 2.1/2" on a 3" long bolt. Did another test and the product crept down 1.1/2" on another bolt. The bolts that the test was done on came out with using hand tools only and did not break off. Stuff really is the cats ass !!
